## NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The community map repository should be consulted for possible updated or additional flood hazard information.

To other more delated information is existed when Base Book Elevations (BES) for the delay when before identified its users are located in the deep wind before from the second of the delay of the second in the Policy of the Company of Silviuter Elevations tables contained within the Food instance Sably (FIS) Report that accompanies first FISM. Users about the aware that IDEs allows on the FEM represent counted when-book about the aware that IDEs allows to the FEM represent counted when-book about the second of the Company of

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood insurance Porgram. Floodway widths and other pertinent floodway data are provided in the Flood insurance Study Report

Certain areas not in Special Flood Hazard Areas may be protected by flood control structures. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study Report for information on flood control structures for this jurisdiction.

The projection used in the preparation of this map was Taxas State Plane Central Zone (PPS zone 4250). The horizontal datum was NAD 25, GRS 1950 pp. 1950 pp

Base map information shown on this FIRM was provided in digital format by the City of Bryan, City of College Station and Brazos County, produced at a scale of at least 1:12,000, from aerial photography dated 2005 or later.

This map reflects more detailed and up-to-date stream channel configurations than those shown on the previous FRIM for this jurisdiction. The floodysins and floodways that were transferred from the previous FRIM rate, have been adjusted to conform to threat entered to the previous FRIM rate, have been adjusted to conform to threat new stream channel configurations. As a result, the Flood Profile such Floodway Data balles for multiple setteres in the Flood insurance Study Report (which contains authoritative hydraulic data) may reflect stream channel distance that didle from what is shown on this rate.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to evitify current corporate termit locations.

Please refer to the separately printed Map Index for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities sales containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

For information on available products associated with this FIRM visit the Map Service Center (MSC) webste at <a href="https://microtema.gov">https://microtema.gov</a>, Available products may include previously sissued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of this map. Many of these products can be ordered or colamed areasy from the MSC webstee.

If you have questions about this map, how to order products, or the National Flood Insurance Program in general, please call the FEMA Map Information eXchange (FMIX) at 1-877-FEMA-MAP (1-877-336-2627) or visit the FEMA

SPECIAL FLOOD HAZARD AREAS (SPHAs) SUBJECT TO INJURATION BY THE 1% AMUNAL CHARCE FLOOD THAT IS A SHOULD AREA OF SHOULD THAT IS A SHOULD THAT IS A SHOULD AREA OF SHOULD THAT IS A SHOULD THA

ZONE A No Base Flood Elevations determined.

ZONE AH Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Bevations determined.

ZONE AO Flood depths of  $1\ to\ 3$  feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined

Special Flood Hazard Areas formerly protected from the 1% annual charac-flood by a flood control system that was subsequently decertified. Zone All resistants that the former flood control system is being resistent for provide protection from the 1 W annual chance or greater flood. Area to be protected from 1% semial chance flood by a Floderal flood protection system, under construction, no flast effood televations determined.

ZONE V

ZONE VE Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept firee of encroactment so that the 1% annual chance flood can be carried without substantial increases in

ZONE D

Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood. OTHER AREAS

Areas determined to be outside the 0.2% annual chance floodplain. Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and CPAs are normally located within or adjacent to Special Flood Hazard Areas.

19i Annual Chance Floodplain Boundary

0.2% Annual Chance Flooriniain Boundary \_\_\_\_ Floodway boundary
